

“Between atom and cell”

A dynamic interdisciplinary field
that aims to study biological macromolecules and assemblies
at an intermediate level
between atomic-resolution structural descriptions
and cellular-scale observations

Who is MOSBRI?

- ▶ 15 partners from 11 countries (13 academic, 2 industrial)
- ▶ Co-ordinated by Institut Pasteur (Paris, France)
- ▶ Started on the 1st of July 2021 (duration: 4 years)
- ▶ **More complete information about MOSBRI will be provided at the end of the course**

MOSBRI courses and conferences

- ▶ Training schools and courses: 14 courses will be organized until June 2025

Full list : <https://www.mosbri.eu/events/courses/>

- *Circular Dichroism: best practice and data analysis (Århus, 3-5 November 2021)*
- *Quality control of purified proteins (Paris, 4-8 April 2022)*
- **Fluorescence Microscopy for amyloid fibril imaging** (Linköping, 23-25 May 2022)

Registrations open; Deadline April 19th

- Quality control for integral membrane proteins (Hamburg, 12-14 September 2022)

Registration opening in May

- ▶ **1st MOSBRI conference** (Institut Pasteur, Paris, France, 20-22 June 2022):

<https://www.mosbri.eu/events/conferences/paris-2022/>

Registrations open; Deadline May 20th

Next conferences in Zaragoza (June 2023) and Ljubljana (June 2024)

Quality control of purified proteins

QC4Bio

This basic-level training course is aimed at biologists, immunologists, pharmacologists, biochemists, structural biologists, etc., who want to improve their skills in quality control of protein samples, and more specifically on the analysis and optimization of their samples for a variety of downstream applications.

The objective is to help warranting more productive, robust and reproducible research by applying quality control pipelines systematically to all purified protein samples.

The analysis of different cores facilities in Europe

- ▶ A lot of time is spent on poor quality samples

- ▶ The best experiments in the world will turn garbage in expensive garbage

ACCURATE BUT NOT REPEATABLE

REPEATABLE BUT NOT ACCURATE

Our aim:

ACCURATE AND REPEATABLE

Improving the quality of the samples is essential to improve the quality, reproducibility, accuracy of the results we produce

Researcher Opinion about QC

- “I do not have time...”
- “My boss thinks it is a waste of time...”
- “It is the way we have prepared samples in the lab for the last ten years...”
- “But some experiments have worked with this sample...”
- “I do not know how to do it...”
- “I will do the experiment anyway it may work...”
- “Not me, I prepare the best sample...”

Different approaches to solve the issue
